

Car Selling App

Team Members: Nicola Fabian, Iacoblev Vlad

General Description:

This application concentrate more on the customers, helping them to find their dream cars .This app is more of an intermediate between a seller and a buyer

Registration:

The first step is registration. This process consists of selecting what kind of user you want to be:

-Buyer

-Seller

Both types of registrations require a unique username and password

Seller:

After the seller logs in he can add any car he owns and wants to get rid of (he needs to specify the manufacturer of the car , the year of production , horse power and the color of the car).

He can also delete the announcement regarding the car if it was already bought by someone

Also he can edit the announcement in case something wrote is misspelled or misleading

Buyer

The buyer needs to login into the app where he will see a long list with all the cars available.

He can also, filter the cars by the manufacturer, color, horse power or year.

Buyers can also rate the seller.
